

Spring Return Plunger Dosing Pumps

Type A and AP-A

The gearbox is a standard wormwheel reduction system with all bearings supported within a fully lubricated gearbox.

The mechanism for variation of the stroke length a positive stroke spring return that is operated by an eccentric.

PUMPING HEADS

Pumping heads are made in standard executions: S.S. 316 or PVC

A wide range of other materials like HASTELLOY, ALLOY, PTFE, PVDF, PP are according to the liquid to be dosed.

Piston gaskets are of the lip type design and are available in a wide range of materials (FPM, EPDM, SILICONE, ADIPRENE) and also in PTFE packing. Standard liquid handled maximum temperature

- 90° C with S.S. 316 pump head
- 40° C with PVC pump head

Jacketed pump head for either cooling or heating are available to suit requirements. Piston glandling arrangements can be supplied with water washed seals to continuously flush the piston.

PLUNGERS

There are made in S.S. 316 or Ceramics

SUCTION AND DISCHARGE CONNECTIONS

Normally are threaded, but they can be supplied also flanged.

All the pumps have a ball valve standard: single and double balls by the function of the piston diameter or the material execution.

STROKE ADJUSTMENT

Flow rate adjustment is possible while running or at standstill. The movement of the piston is based on a precise reciprocating gearbox, which provides an exact volumetric displacement.

Stroke adjustment can be carried out:

- Manual: by a linear micrometer screw
- Electrical: via servo motor with 4-20 mA signal upon request interface PROFIBUS or other BUS
- Pneumatic: by a pneumatic servo control with signal from 3 to 15 PSI

MULTIPLE HEADED PUMPS

Different multiple heads units are available on request.

Each pumping element has independent adjustment while running or at standstill.

HIGH PRESSURE EXECUTION

These pumps use the same crank mechanism of the pumps "A" type, but the difference is on the hydraulic part that must be suitable to satisfy very hard requirements.

"A" series piston pumps are available in different sizes:

- A 125 N
Piston stroke 12.5 mm
- A 175 N
Piston stroke 17.5 mm
- A 250 N
Piston stroke 25 mm
- A 350N
Piston stroke 35 mm

For these types, 11 different piston sizes are available to suit different applications for capacity and pressure.

(*1) Piston strokes number during 1 minute with 4 poles installed motor (1400 rpm)
 F = Reducer ratio 1 : 25 = 56 strokes at 50 Hz / 67 strokes at 60 Hz
 C = Reducer ratio 1 : 14,5 = 96 strokes at 50 Hz / 116 strokes at 60 Hz
 B = Reducer ratio 1 : 12,5 = 112 strokes at 50 Hz / not suitable at 60 Hz

(*2) The indicated capacity value is subject to change due to the working pressure, dosed liquid, viscosity and installation asset.

(*3) High pressures are available

(*4) Different ranges of connections are available on request

(*5) The weight is approximate and it is the value of the pump fitted with a totally enclosed fan-cooled outdoor motor.

(*6) The pumps can be supplied with accessories if requested

(*7) The pumps are epoxy coated RAL 7030
